

# WANTED!

## ASIAN LONGHORNED BEETLE\*

**Names/Aliases:** Asian longhorned beetle (*Anoplophora glabripennis*)

**Last Known Address:** China, Japan, North and South Korea, and Taiwan. Accidentally introduced to the U.S. and currently present in Illinois, Massachusetts, New Jersey, and New York.

**Field ID:** Adults are about 20-35 mm long with glossy black bodies and about 20 irregular white spots on the elytra. Females are larger than males. Antennal segments with whitish-blue bases. Larva (about 50 mm long when fully grown) is legless with creamy white coloration.

### CAUTION

Attacks many broadleaf trees, including ash, birch, elm, maple, mulberry, poplar, willow and others. Larvae feed in cambium and later enter woody tissues. Pupation occurs in the heartwood and emerging adults make large (about 10 mm in diameter), round exit holes in the tree. Both weakened and healthy trees can be attacked. Severe damage may lead to death of the host tree.
